

Our Science Principles

- Children are engaged in hands-on, exciting and stimulating lessons.
 - Children's questions form the basis for scientific exploration.
- High-quality resources are readily available, and used to enhance learning opportunities.
- Visitors, trips and other curriculum enhancement opportunities are planned for each unit of study.
- Children understand what it means to work scientifically, and can give examples.
- Children have time for prediction and reflection – they know that it is OK to change ideas and to learn from any errors.
