

## Making a clock

We would like you to spend today's maths lesson making your own clock. We understand that you may not have lots of resources at home but you don't need much....you can draw your clock into your book or use a page from your book to cut out. All you need is a clock face and 2 hands, one for the minutes and one for the hours. The clock hands don't need to stick on the clock, they can just be placed on when needed. We will be using these clocks next week to help us solve time problems.

Here are some examples of home made clocks.

This person has put the clock into quarters and has noted 'o'clock' 'half past' 'quarter to' and 'quarter past'

This person has labelled their clock's hands to help them further...
