To understand words associated with trying hard

Let's recap :

Match the text to the pictures about 'How bees make Honey'

Text

The bees cover the cell with a wax cap to seal it for when it is needed.	Bees store the nectar they have drunk in their 'honey stomachs'.	The warmth of the hive enables the water in the nectar to evaporate to make honey.
Inside the honey stomach, the nectar is broken down by enzymes into two types of sugar - fructose and glucose.	The bee flies back to the hive and spits the contents of its honey stomach into one of the honeycomb cells.	Bees drink nectar from flowers using their proboscis - a long tongue which they use like a straw.
